

IN THE CLAIMS

Please cancel claims 2, 3, 7 and 8.

Please amend the claims to read as indicated herein.

1. (currently amended) A camera comprising:

[[-]] an image recording system for making image recordings,

[[-]] a memory ~~for storing a plurality~~set of user IDs that have been pre-installed in the camera rather than set in by one or more users,

[[-]] a user-operable selector control for enabling user selection of a said user ID stored in the memory and for setting a current-user data item stored in the memory to indicate the most recently selected user ID, this current-user data item being changeable by subsequent users by selecting a different user ID from said ~~plurality of stored user IDs~~set, and

[[-]] an identity association arrangement ~~operative~~arranged, upon an image recording being made using the camera, to associate with that image recording the user ID currently indicated by the current-user data item.

2-3. (canceled)

4. (currently amended) A camera according to claim 3~~1~~, wherein the ~~plurality~~set of user IDs comprises user IDs in the form of icons.

5. (original) A camera according to claim 1, wherein the image recording system stores an electronic image in said memory, the user ID indicated by the current-user data item being copied and stored in association with the stored image recording.

6. (currently amended) A method of identifying the taker of an image recording, comprising the steps of:

[[-]] ~~storing a plurality~~pre-installing a set of user IDs in a memory of a camera prior

to use by a user,

[[-]] having a current user of the camera select one of said pluralityset of stored-user IDs using an input selector of the camera, and storing an indication of the selected user ID in the memory of the camera,

[[-]] upon the current user taking an image recording using the camera, associating with that recording the user ID currently indicated by the stored indication.

7-8. (canceled)
